

GAMEBUTLER

Game

Personal gaming concierge — UI/UX design handoff

Version 1.0 July 2026 5 directions · 12 screens · Full spec

What’s in this document

This document covers the complete UI/UX design for GameButler across five visual directions, selected direction deep-dive, all app screens, component states, interaction flows, and design tokens.

01	Design Directions 5 visual explorations for GameButler	02	Dashboard Now playing, up next, Butler quick-access
03	Library Browse, filter, and search 847 games	04	Backlog Kanban board: Backlog → Queue → Playing → Done
05	Butler Mood-based game recommendation engine	06	Mobile iOS: Dashboard, Library, Butler, Backlog
07	Additional Screens Game detail, onboarding, settings	08	Component States Empty, skeleton, hover, pressed, Butler thinking
09	Interaction Flows Add to queue, mark done, Butler cycling	10	Design Tokens Colors, typography, spacing, components

Five visual explorations

We explored five distinct aesthetic directions before selecting **1a The Launcher** as the foundation. Each direction is shown as a dashboard view.

1a The Launcher — dark navy, blue accent

1b Terminal Quest — CRT green, pixel font, scanlines

1c The Critic — editorial magazine, cream, serif

1d Neon Overdrive — cyberpunk hot-pink/cyan, chamfered

Dashboard

The primary screen. Shows the focused "now playing" game as a full-bleed hero, currently playing games, and the ordered "up next" queue. The Butler CTA lives in the sidebar.

Dashboard — 1280×720 desktop. Blue = focused game, orange dot = casual mode. Sidebar shows ordered queue + Butler shortcut.

Library

Filter sidebar, search, card grid with status badges per game.

Backlog

4-column Kanban: Backlog (824), Up Next (4), Playing (3), Completed (47).

Library - filter sidebar + 5-col grid with status border-top coding

Backlog Kanban - 4 columns, drag handles (::), green playing indicator dots

Recommendation Engine

The Butler screen takes mood, time, and genre inputs and returns a ranked game suggestion with reasoning. The “why this game” panel is key — it builds trust in the recommendation.

Butler — left panel: inputs. Right panel: recommendation result with "why this game" reasoning + alternatives.

iOS screens

All core screens adapt to mobile. Bottom tab bar replaces the top nav. Dashboard hero card collapses to scrollable layout. Butler uses full-screen mood/time picker with result below.

Dashboard

Library

Butler

Backlog

Game Detail

Slide-out panel from Library. Shows art, stats, tags, personal note, platform, and queue actions.

Game detail slide-out – art header, stats, tags, personal note, platform, and queue actions

Onboarding

4-step flow: welcome → attention levels → connect platforms → preferences. Steam shown as connected.

Onboarding step 3 of 4 – platform connection, Steam connected with 847 games found
